Create your own training lab/ workshops for DevOps tooling or any tool/technology using Ansible and Docker

26 Jan 2018
Amsterdam

Presenter: Arnab Sinha, Continuous Delivery Expert, Tata Consultancy Services

How about bootstrapping a machine to setup a complete lab/workshop in less than ~ 1 minute. The lab is scalable on the fly, leverages the idempotency feature of Ansible at its best and leverage Docker for sandboxing. Every student has his/her own sandbox and extreme LEAN Infra usage.

Make it easy to learn but learn by doing!

For enterprises, learning is an investment which involves, infrastructure, material, setup and effort.

Creation of a Launchpad framework to train a huge workforce using Ansible & Docker.

From bootstrapping a machine to setup of the complete lab taking ~ 1 minute. The lab is scalable on the fly, leverages the idempotency feature of Ansible as its best. Every student has his/her own sandbox and extreme LEAN Infra usage. A plethora of tags in the lab setup playbook brings various functionalities at your finger tips, like SSH Key refresh, dynamic scale-up/scale-down of control and managed nodes for the students, private network setup, scale-up/scale-down of participants and many more.....

Arnab is a tech savvy, innovator at heart and has played the role of Continuous Delivery Specialist, Agile Coach & Solution Architect with TATA Consultancy Services for various multi-national customers. Dreams, Believes and Implements ideas which is demonstrated by multiple patents held by him, open source contributions and has helped organizations reap benefits.
