

Workshop

Gold Sponsor

Organised by:

The Joy of Kubernetes -Learn to feel the container orchestration love

14 February 2018, Manchester

Presenter: Jake Sanders, Operations Engineer, LiveWyre

With the breathtaking pace of Kubernetes development and prominent presence in tech news it's easy to forget that this prolifiic containerisation technology only hit v1 in 2015. Despite a number of very prominent examples showcasing the power and efficiency of Kubernetes there still remains a lot of confusion over how and why to use this exciting container orchestration technology. The Joy of Kubernetes is a basic level workshop designed to showcase the benefits of Kubernetes and will enable attendees to understand the basics needed to setup their own cluster.

The scope of this workshop will be broad and will suit anybody working in a DevOps environment that wants to learn more about how and why to implement Kubernetes in their organisation. Through a mixture of presentations, demos and hands-on examples, workshop attendees will:

- ✓ Understand why containers are useful, but have limitations.
- ✓ Learn how to solve some these limitations with Kubernetes Pods.
- Know why the world's biggest companies are powered by schedulers and containers.
- √ Have a basic core understanding of how to use Kubernetes.

As an operations Engineer Jake Sanders has been immersed in containerised infrastructure from a period before the release of Docker.

With 3 years of Kubernetes usage under his belt, he used the skills and knowledge gained to contribute to the project. With the recent launch of the Cloud Native Computing Foundation Certification Program, he was happy to become one of the first Certified Kubernetes Administrators.

While working for LiveWyer Jake has successfully contributed towards and delivered a number of large Enterprise solutions in various sectors. As well as implementing high quality solutions Jake has helped to develop and deliver training packages for DevOps teams who are looking to engage with Kubernetes.

Agile 1's Game Presenter: Seb Rose, Cucumber

The agile manifesto lists some values. Agile methods often give you rules and guidelines. Understanding 'why' some recommendations are useful is often skipped. The "Agile 1's game" simulates swarming, story decomposition and WIP limits to give teams a visceral understanding of why some counter-intuitive practices actually lead to more regular delivery of value for the customer.

Often called the 'Kanban 1's game' I've found that this game is very useful for teams trying to get an understanding of basic agile practices, irrespective of which flavour of agile they are going to adopt. We'll spend a lot of time in this session playing, which is fun, but there is a serious point too. And, by the end of the session, delegates will be in a position to run the game themselves.

Seb Rose has been aConsultant, coach, designer, analyst and developer for over 30 years. Seb has been involved in the full development lifecycle with experience that ranges from Architecture to Support, from BASIC to Ruby. He's a partner in Cucumber Limited, which helps teams adopt and refine their agile practices, with a particular focus on collaboration and automated testing. Regular speaker at conferences and occasional contributor to software journals. Contributing author to "97 Things Every Programmer Should Know" (O'Reilly) and lead author of "The Cucumber for Java Book" (Pragmatic Programmers). He blogs at cucumber.io and tweets as @sebrose.

The Joy of Kubernetes -Learn to feel he container orchestration love

14 February 2018, Manchester

Don't forget the developers! **Presenter:** Kevin Rutherford, The XP Surgery

This session will be a bit of a rant, aimed change agents, managers and senior technical staff. I will recount my experiences of agile transformations that have forgotten that the full term is 'agile software development'. I will also discuss approaches that do it right, including references to John Shook's work helping to create the NUMMI Toyota/GM car plant in the US.

The overall message is that stories, Post-its, stand-ups etc are not enough. The developers need help. Adopting emergent architecture, continuous delivery, pair/mob programming, test-driven development and so on is no walk in the park. It must be supported by mentoring and training, and by management processes including vertical slicing, feedback loops etc.

I will involve participants in exploring some of these topics, and in simulation games that demonstrate the cost to an 'agile transformation' when the team's technical practices are not placed at the centre of everything.

Dr Kevin Rutherford is a highly experienced software development coach, speaker, and extreme programmer working for the XP Surgery. He is the creator of the vastly under-rated Reek code smell detector, and the vastly over-rated book Refactoring in

If you have ever used Unix System V or taken out a mortgage in the UK, you have unwittingly used his code. He now spends much of his time coaching and mentoring software development teams throughout the UK. His Erdos number is 3, and he was using vi before you were born.
